

Find out more...

E.ON is one of the UK's leading power and gas companies – generating and distributing electricity, and retailing power and gas – and is part of the E.ON Group, the world's largest investor-owned power and gas company. We employ around 17,000 people in the UK.

By explicitly defining our responsibilities, we can focus our efforts so that customers, the Government and other stakeholders will know what to expect. In turn, they will provide the framework and direction for our Corporate Responsibility (CR) programme, and this year's CR Report follows this structure. Please have a look at it either online or in printed format.

The year in review

→ **Planet and Society**
We've reduced the carbon intensity of our UK generation business from 710kt CO₂ to 686kt CO₂/TWh.

→ **Customers**
We've encouraged our customers to purchase products with environmental features by launching our Go Green and EasyGreen propositions.

→ **Our People**
We've launched the Engineering Academy in direct response to the skills crisis which is affecting most of the engineering sectors within the UK.

The year ahead

→ **Planet and Society**
We will be investing billions in new power generation projects that will ensure we have secure energy supplies whilst helping move the UK towards a low carbon future.

→ **Customers**
We will continue to work with both our residential and business customers to help them lower their energy consumption and impact on the environment.

→ **Our People**
We will continue to drive forward a detailed programme to implement our people strategy and address the challenge of an increasingly competitive employment market.

Changing Energy

Addressing energy challenges,
now and for the future

Changing Energy

Paul Golby – E.ON UK Chief Executive

→ "As part of the energy industry, we've often been viewed as part of the problem, but we have the expertise and resources to deliver real and lasting solutions."

Paul Golby
E.ON UK Chief Executive

Paul Golby's message

In looking back at 2007, I believe we reached a milestone in the history of our industry. The challenges we faced – and continue to face – are well documented: in short, energy is becoming scarce, more expensive and the way it's produced and used can harm the environment.

Changing Energy is what we're doing. We're aiming to transform every aspect of energy: how we make it, how it's used, and society's understanding of it. To achieve this, we're focusing our efforts in three key areas: Planet and Society, Customers and Our People.

Our Changing Energy strategy impacts every aspect of our business, every single day. It's the biggest challenge any business could face, but it's one that we believe we're uniquely positioned to take up.

Paul Golby
E.ON UK Chief Executive

Our Corporate Responsibilities

Under the three pillars of Changing Energy we've identified our Corporate Responsibilities to drive our actions and to show our responsible and sustainable approach to how we do business.

Planet and Society

Working towards low carbon energy

- Produce and deliver energy to our customers, whilst reducing our carbon intensity.

Keeping the lights on

- Provide a secure energy supply, now and for the future, through reliable networks and diverse energy sources.

Reducing our environmental impact

- Minimise the impact of our business operations, reducing emissions and waste.

Customers

Helping customers with their energy needs

- Support the vulnerable and fuel poor, help society to access energy and to use it efficiently by providing customer focused products and services.

Being trusted

- Act responsibly, building customer and stakeholder relationships to be recognised as a trusted energy partner.

Our people

- Create success through our people and for our people.

Facts and figures

6.4 million tonnes of lifetime carbon saving from our investment in energy efficiency products

58.1 GWh of renewable electricity provided to residential customers

650 of our suppliers have signed up to our responsible procurement policy

1 in 5 of our employees took part in our community programme

21 wind farms, combined with our other renewables, provide enough green energy to power all the homes in a city the size of Manchester

£500m our investment to build one of the world's most efficient power stations at the Isle of Grain in Kent
